Robotics Project #1 · Kids.JoinDev

Cardboard Robot Buddy

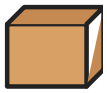

Ages 6+ · 45 min · Build with a grown-up!

🎯 Goal

Build a friendly robot from boxes and learn the 3 parts every robot has: body, senses and brain.

🧰 You need

2 small cardboard boxes

2 paper tubes (arms)

bottle caps (eyes)

glue stick or tape

kid scissors

markers

🔧 Build it

1. Pick a big box for the body and a small box for the head. ☐
2. Tape the head on top of the body. ☐
3. Push tubes into the sides for arms (a grown-up can cut holes). ☐
4. Glue bottle caps on as eyes: these are its 'sensors'. ☐
5. Draw a control panel on its tummy: this is its 'brain'. ☐
6. Give your robot a name and a job! ☐

⚠️ Safety

A grown-up does any cutting with a craft knife. Use kid scissors only.

💡 How it works

Real robots have a body (frame), sensors (eyes, ears, touch) and a brain (a computer) that decides what to do. Your buddy has all three, pretend style!
