Robotics Project #2 · Kids.JoinDev

Buzzing Bristlebot

Ages 7+ · 30 min · Build with a grown-up!

🎯 Goal

Make a tiny robot that zooms around using vibration.

🧰 You need

toothbrush head

small vibration motor (pager motor)

CR2032 coin battery

double-sided foam tape

googly eyes

🔧 Build it

1. A grown-up cuts the handle off the toothbrush head. ☐
2. Stick foam tape on top of the brush. ☐
3. Stick the motor on the tape, spinning part hanging off the front. ☐
4. Tape one motor wire under the battery. ☐
5. Touch the other wire on top of the battery: buzz! ☐
6. Put it on a table and watch it scoot. ☐

⚠️ Safety

Coin batteries are dangerous if swallowed. A grown-up keeps them and stores them away. Never put them in your mouth.

💡 How it works

The motor spins a lopsided weight, so it shakes. The bent bristles turn each shake into a tiny hop forward.
