Robotics Project #7 · Kids.JoinDev

Touch Sensor Robot

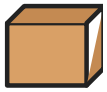

Ages 7+ · 40 min · Build with a grown-up!

🎯 Goal

Give your cardboard robot a tummy button that makes it beep.

🧰 You need

cardboard robot (from project 1)

kitchen foil

small sponge

buzzer

AA battery pack (2xAA)

wires with clips

🔧 Build it

1. Glue foil on two small card squares. ☐
2. Put a sponge with a hole between them, foil sides facing. ☐
3. Clip one wire to each foil square: this is your switch. ☐
4. Connect the switch, buzzer and battery in a loop. ☐
5. Tape the switch on the robot's tummy. ☐
6. Press it: BEEP! Let go: quiet. ☐

⚠️ Safety

Use only AA batteries. Never use a wall plug socket.

💡 How it works

Pressing pushes the foils together and closes the circuit. A touch sensor tells a robot something bumped it.
