Robotics Project #10 · Kids.JoinDev

Arduino Blink and Beep Robot

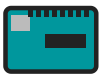

Ages 9+ · 60 min · Build with a grown-up!

🎯 Goal

Use an Arduino to blink a robot's eyes and beep a tune.

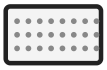

🧰 You need

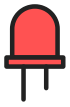

Arduino Uno (or clone)

USB cable

breadboard

2 LEDs + 2 resistors (220 ohm)

buzzer

jumper wires

🔧 Build it

1. With a grown-up, install the Arduino IDE. ☐
2. Push the LEDs and resistors into the breadboard. ☐
3. Wire LEDs to pins 12 and 13, buzzer to pin 8, all back to GND. ☐
4. Open blink_beep.ino and click Upload. ☐
5. Watch the eyes blink and hear the beep! ☐
6. Change the numbers in delay() to change the speed. ☐

⚠️ Safety

Always use a resistor with an LED. Unplug the USB before changing wires.

💡 How it works

The Arduino runs loop() forever: turn pin on, wait, turn pin off, wait. That's how robots repeat actions.
Code: blink_beep.ino (in the project folder)
