Robotics Project #13 · Templates 4/4 (1:1 scale)

Wheelbarrow Walker Robot

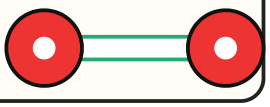

PRINT AT 100% / ACTUAL SIZE
Do NOT 'fit to page'
Check the 100 mm ruler first!

cut (solid) — — — fold (dashed) ○ hole: grown-up pokes with a pencil/awl red = size in mm

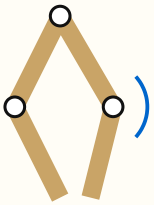

1 Cut and fold the barrow tray (sheet 1). Glue tabs inside.

2 Push skewer axle through a paper straw; glue a bottle-cap wheel on each end.

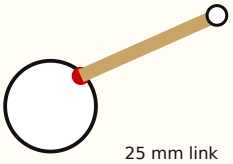

3 Pin thigh+shin and upper arm+forearm with Ø3 pins so they swing.

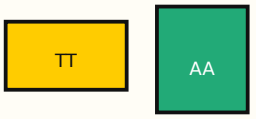

4 Glue the hands to the handles and the hip bar to the barrow frame.

5 Join the axle crank (off-centre Ø3 hole) to the knee with the 25 mm link.

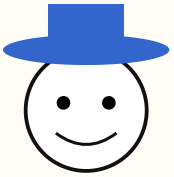

6 Add TT motor + 2xAA + slide switch — or skip it for push mode.

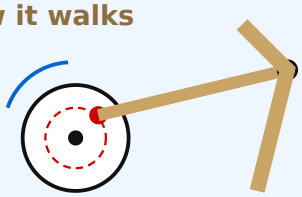

or push!

7 Add ping-pong ball head and bottle-cap hat. Test, then tune the link.

How it walks

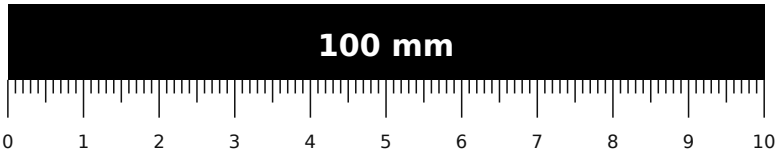

Wheel turns → off-centre pin goes round → link pushes knee back & forth → legs step!

Parts checklist

- [ ] 3 mm cardboard
- [ ] ~12 ice-cream sticks
- [ ] 2 bottle caps or 65 mm wheels
- [ ] Skewer / 3 mm rod
- [ ] Paper straw
- [ ] TT gear motor
- [ ] 2xAA holder
- [ ] Slide switch
- [ ] Ping-pong ball
- [ ] Bottle cap (hat)
- [ ] Hot glue (by a grown-up)

Safety first!

- A grown-up uses the hot glue gun.
- A grown-up does all craft-knife cutting and poking holes.
- Skewer tips are sharp: snip them.
- Batteries: put them in the right way round, never short the wires, take them out when finished.
- Keep small parts from little kids.

20 mm

Calibration: the black bar must measure exactly 100 mm and the square 20x20 mm. If not, reprint at 100% (Actual size). Use card ~1 mm (cereal box) for parts.
